Enumerator™ Sequential Numbering Tool

Use the new Mate Enumerator™ Sequential Numbering Tool to stamp sequential serial numbers of up to six characters on your sheet metal parts. This application is essential where part traceability is important.

- ▶ Six characters, up to 0.118(3.00) high.
- ▶ Two modes: Sequential Number and Fixed Number.
- ▶ Start number is adjustable.
- ▶ Material thickness from 0.020(0.50) to 0.236(6.00).
- ▶ Thick Turret 3-1/2" D Station.
- ▶ Four external keyways for 0, 90, 180, 270 orientation.
- ▶ Robust construction for long service life.

The core of the Mate Enumerator Sequential Numbering Tool is a robust stamping head that uses up to six numerical stamp wheels. Each wheel is engraved with characters from 0-9. As the tool is stroked by the machine, the engraved characters leave a crisp and clean mark in the top surface of the material. As the tool retracts, the Mate Enumerator Sequential Numbering Tool advances the stamp wheel to the next number in the sequence.

The Mate Enumerator operates in two modes:

- ▶ **Sequential Number Mode:** Use this mode to create sequential numbers. Mate Enumerator advances by one number for each complete stroke the tool makes.
- ▶ **Fixed Number Mode:** Use this mode to create fixed numbers, such as a date, batch number, or part number.

The operator can manually adjust the starting number for maximum convenience across multiple products.

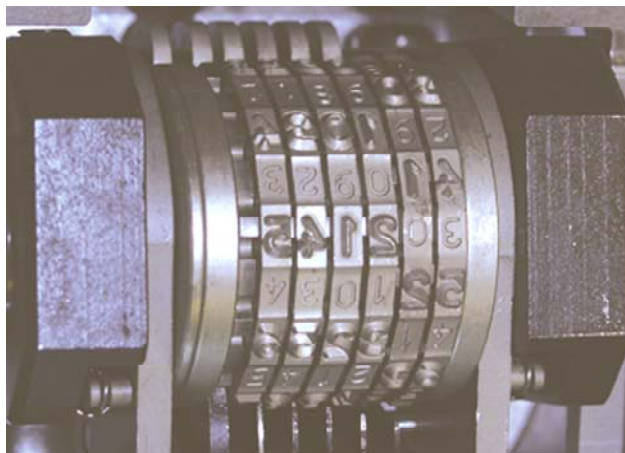

3-1/2" D Station—Dedicated holder design includes easy external length adjustment mechanism to accommodate material thickness from 0.020(0.50) to 0.236(6.00). The holder also features four external keyways that allow 0, 90, 180, 270 degree orientation, for maximum flexibility.

Four different character height options available.

Height	Length	Comments
0.118(3.00)	0.780(19.80)	Standard
0.098(2.50)	0.685(17.40)	Optional
0.078(2.00)	0.610(15.50)	Optional
0.059(1.50)	0.504(12.80)	Optional

3-1/2" D Station, with integral length adjustment and four external keyways for maximum flexibility.

Stamp six-digit numbers up to 0.118(3.00) high. Number advances with each tool stroke.
