

Magnetic Squaring Arm

WITH ANGLE ATTACHMENT

Designed as a guide for bracket work on pressbrakes

MARK 2
VERSION

The small base plate extension is effectively "filled in" (using the angle attachment bar) to facilitate reverse angle bending.

Supplied complete with angle attachment for those more awkward jobs with tapered flanges.

- No clamping required - fixes instantly to the front of the die using a strong magnet.
- Both sides of the squaring arm can be used at the same time (ideal for handed components).
- Re-positioning of top punches less likely - no clamps to clear in the die area.
- Drastically reduces set-up time.
- Available with the squaring arm positioned to the left or right hand side of the stainless steel support platform. (*Left hand version illustrated*)
