Important news for Amada Customers

A Focusing Lens Holder for AMADA Machines – Fully endorsed by Amada UK

Ophir Optronics, Ltd. gives you the power to change. Ophir has developed the changeable lens mount for the Amada CO2 laser machine. This gives the mounted lens user the ability to change a lens without replacing the mount. Simply take out the lens for cleaning, changing focal length or to replace the old lens with a new one.

No need to keep several expensive mounts on the shelf. You can use the same changeable mount time after time. Shipping used mounts back and forth is a thing of the past making the Ophir changeable mount, a time saver.

Allowing you to purchase just the lens by itself, the Ophir changeable mount becomes a manufacturing cost saver as well.
